I. Introduction

The **Hotel Management System** is designed to streamline and optimize hotel operations, covering essential functions like room booking, billing, service management, and customer data handling. With a focus on usability and security, this system is intended to support front desk staff, IT support, and branch manager in efficiently managing reservations and customer services. The project includes features to enforce extend stay durations, and calculate charges for additional services. This document provides a detailed breakdown of the system's functional based on user roles and non-functional requirements, data flow, and operational workflow.

II. System Requirement

This scope will focus on Three user types: Front Desk Staff, IT/Support, and Branch Managers/Owners.

1. Functional Scope by User Roles

Front Desk Staff:

- Handle real-time bookings (in person or over the phone).
- Manage check-ins and check-outs for guests, including room assignment.
- Assist guests in extending their stay, ensuring the system recalculates the total charges.
- Process guest check-outs, ensuring all charges (room, additional services, in-room items) are included in the final bill.
- Update room statuses in real time (available, booked, cleaned).
- Coordinate with housekeeping to ensure rooms are cleaned and prepared for new guests.

IT/Support Team:

- Manage backups, user roles, and data encryption.

Branch Manager/Owner:

- Manage hotel data such as room pricing, room availability, and bookings.
- View daily, weekly, and monthly reports on room occupancy, revenue, and services provided.
- See all user information.
- Manage the system's additional charges for services like food, drinks, and other in-room extras.

2. Non-Functional Scope

The following is a list of non-functional requirements of this system:

1. **Usability:** The interface must be easy for customers, hotel staff, and managers to navigate.

2. **Performance:** The system must handle up to 30 concurrent users with minimal delay.
3. **Security:** Data such as customer profiles and payment details must be encrypted.
4. **Scalability:** Should easily allow the addition of more rooms or branches.
5. **Availability:** The system must operate 24/7 to accommodate online bookings and check-ins.

III. Economic Feasibility

Hotel Management System:

1. **Development Cost:** \$400/month for 3 developers over 3 months
 - o **Total:** \$2,400
2. **Rental Costs:** \$300/month for 3 months
 - o **Total:** \$900
3. **Utilities:** \$50/month for 3 months
 - o **Total:** \$150
4. **Meal & Transportation Stipend:**
 - o **Total:** \$1500
5. **Computer Server (Hardware Requirements):**
 - o **Processor:** i5 or higher — \$150
 - o **Memory:** 16GB RAM — \$70
 - o **Storage:** 512GB SSD — \$90
 - o **Monitor** — \$120
 - o **Keyboard and Mouse** — \$30
 - o **Total Hardware Cost:** \$460
6. **Network Infrastructure:**
 - o **Router** — \$100
 - o **Network Switch** — \$80
 - o **Ethernet Cables** — \$20
 - o **Total Network Cost:** \$200
7. **Power Supply:**
 - o **Total:** \$2,000
8. **Database Software (MySQL):** Free, open-source software

- o **No additional licensing cost**

9. **Internet Connection:** \$20/month

- o **Total:** \$60

10. **Display Screen:**

- o **Total:** \$150

11. **Printer:**

- o **Total:** \$300

Total Estimated Hardware and Development Cost: \$8,120

IV. Function and Task Breakdown

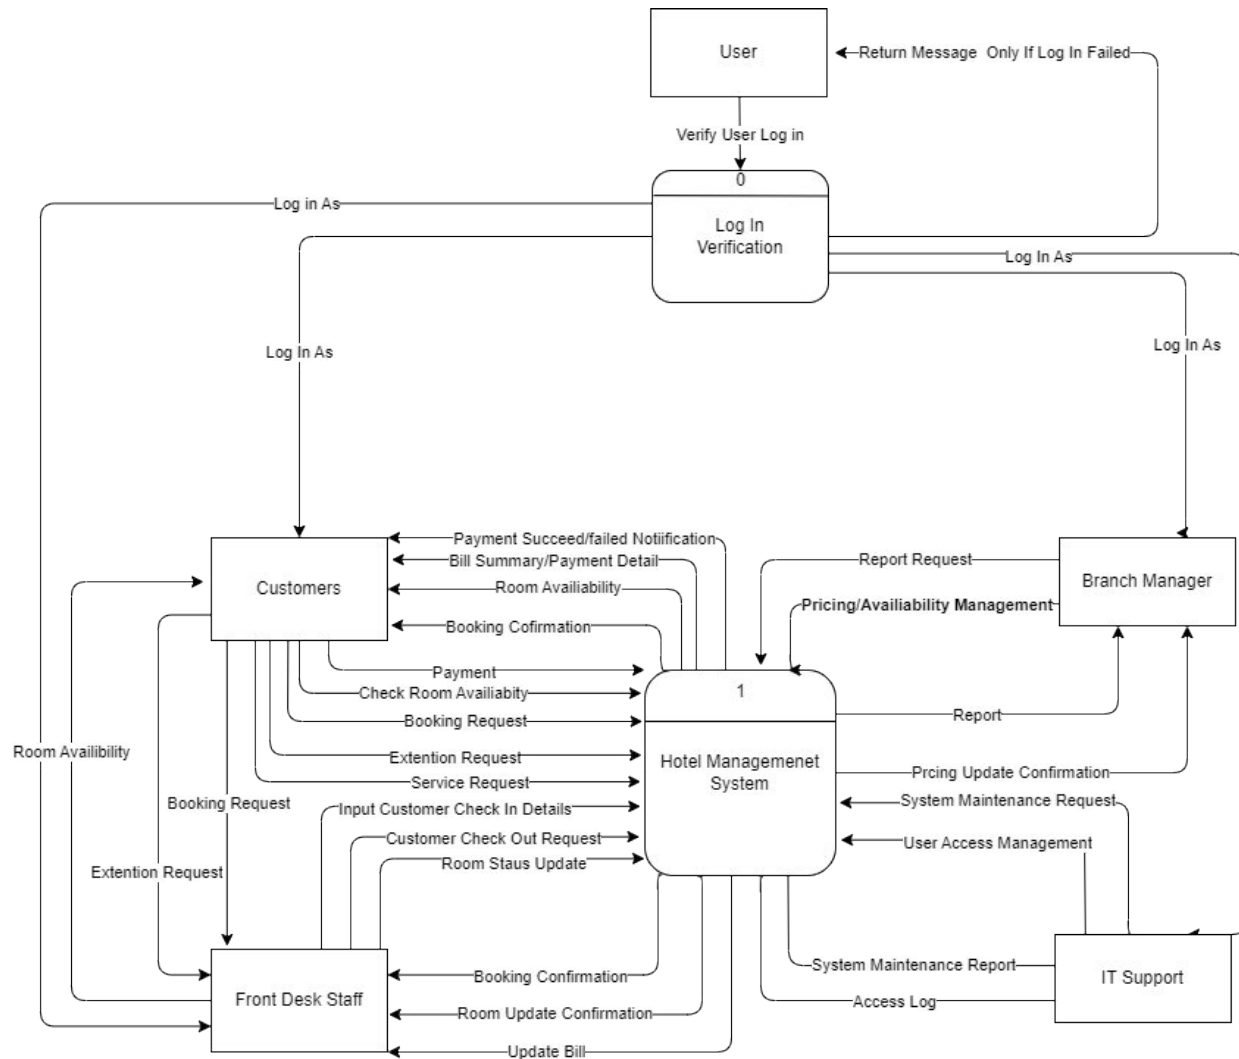

Below is a structured breakdown of functions, tasks, and subtasks by user role with estimated duration.

User Role	Function	Task	Subtask	Duration (Min)
Front Desk Staff	Manage Bookings	Process Booking	Input Customer Details	300
			Confirm Booking	240
		Check-in/Check-out	Assign Room	360
			Complete Check-in	240
			Process Check-out	240
	Billing	Generate Bill	Add Room & Service Charges	180
			Print/Email Bill	180
	Service Management	Record Customer Requests	Add Service Charge	180
Branch Manager	Reporting	Generate Reports	View Booking Summary	240
			View Service Usage	240
	Service Management	Define Service	Check Availability	300
			Create and Adjust Price	300
	Room Management	Manage on Room Type	Create and adjust Price	360
			Room Details	180
	Item Management	Monitor Stock	Check Availability	240
			Create and Adjust Price	240
	Staff Oversight	Oversee Staff Efficiency	Review Staff Data	360

IT Support	System Maintenance	Perform Backups	Schedule and Execute Backup	300
	Access Control	Manage User Roles	Set Access Levels	20

V. Data Flow Diagram

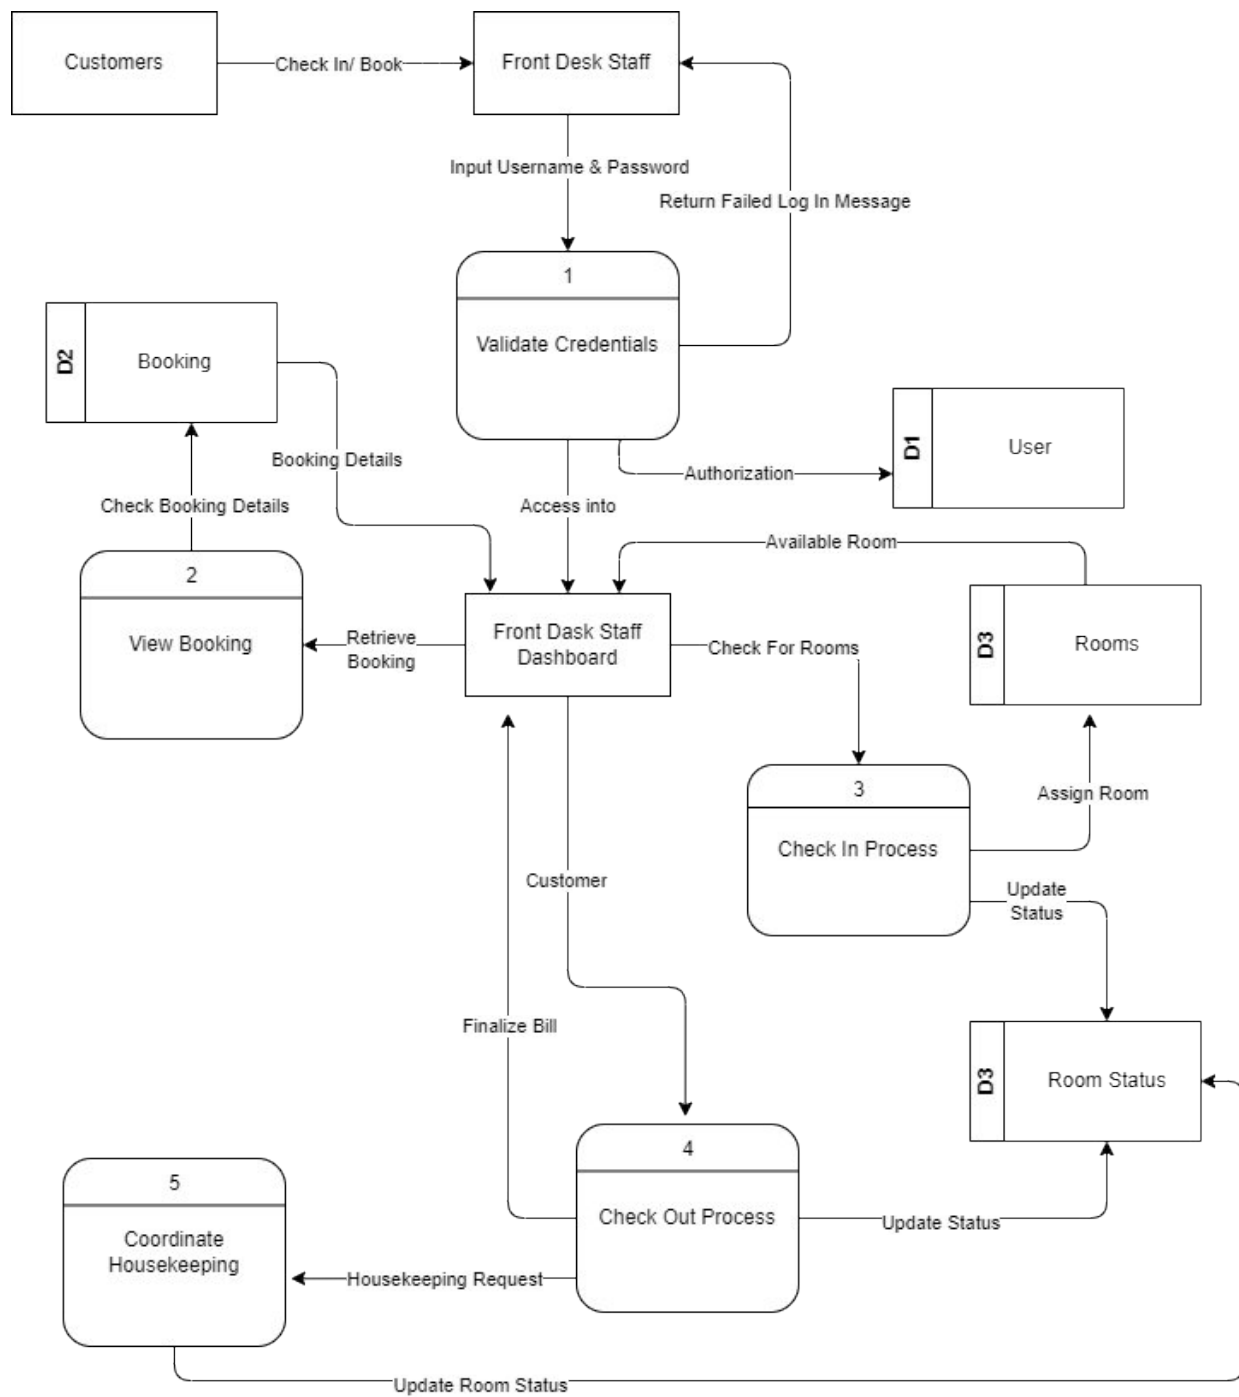

LEVEL 0 – Data Flow Diagram

LEVEL 1 – Customer Data Flow Diagram

- **Check-Out and Final Payment:** Customer settles the final bill, including any services, and room status is updated to available.

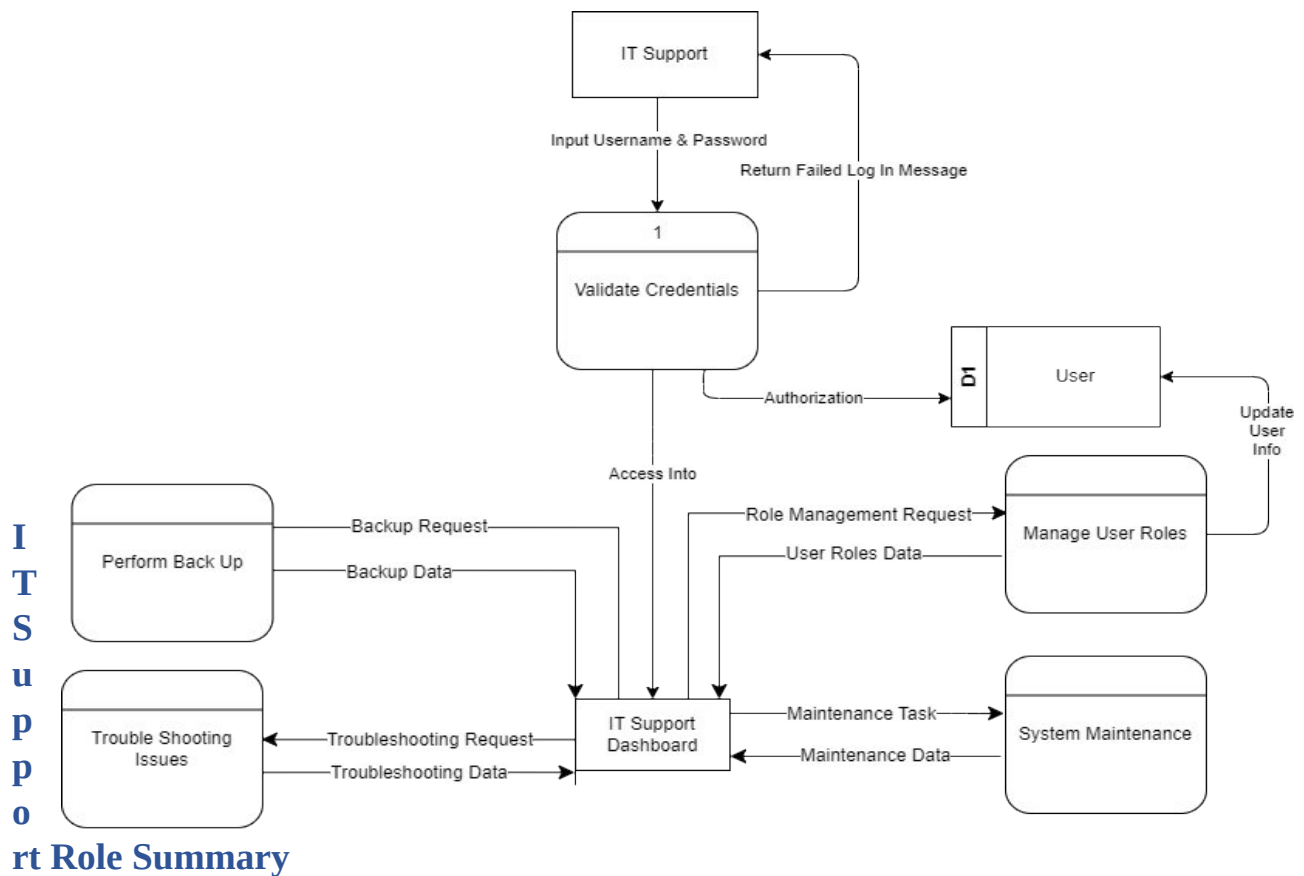

LEVEL 1 –Front Desk Data Flow Diagram

Front Desk Staff Role Summary

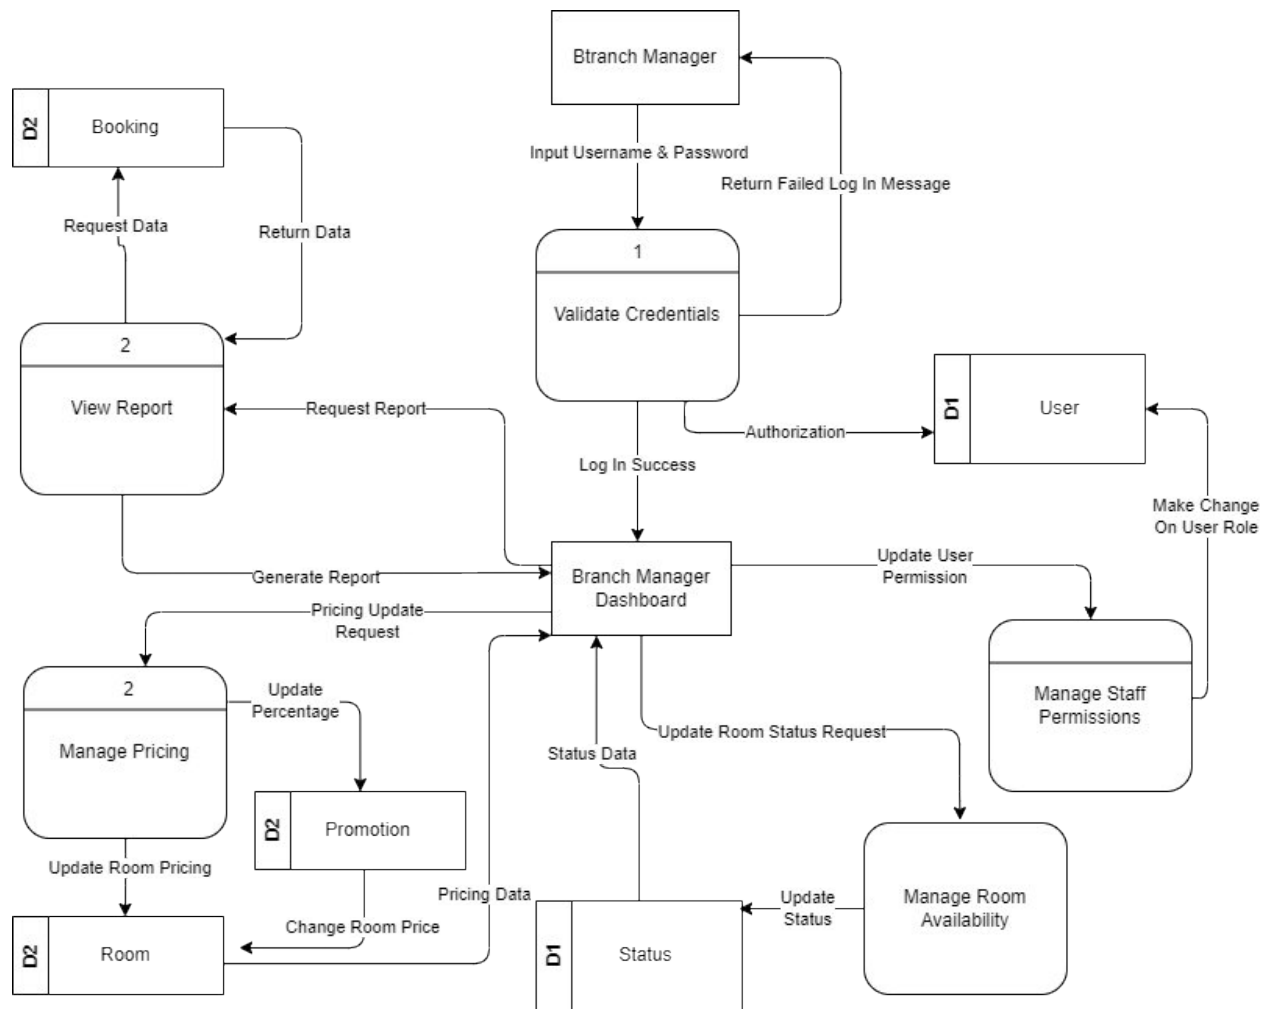

- **Login:** Staff logs in; credentials verified against User table.
- **View Bookings:** Staff reviews current bookings using data from the Booking table.
- **Check-In:** Staff assigns a room to a booking, marking it as occupied in Room_Status.
- **Check-Out:** Staff finalizes billing and updates payment details in Payment; room status is set to available.
- **Room Status Update:** Staff updates room status for real-time availability in Room_Status.
- **Housekeeping Coordination:** Staff coordinates room cleaning by updating housekeeping requests in Room_Status.

LEVEL 1 –IT Support Data Flow Diagram

- **Login:** IT staff logs in; credentials verified against User table.
- **System Maintenance:** IT staff perform regular backups and maintenance, preserving data in Backup.
- **System Updates:** IT applies system patches, which are recorded in System Logs.
- **User Role Management:** IT manages user roles and permissions, updated in User and User_Type tables.

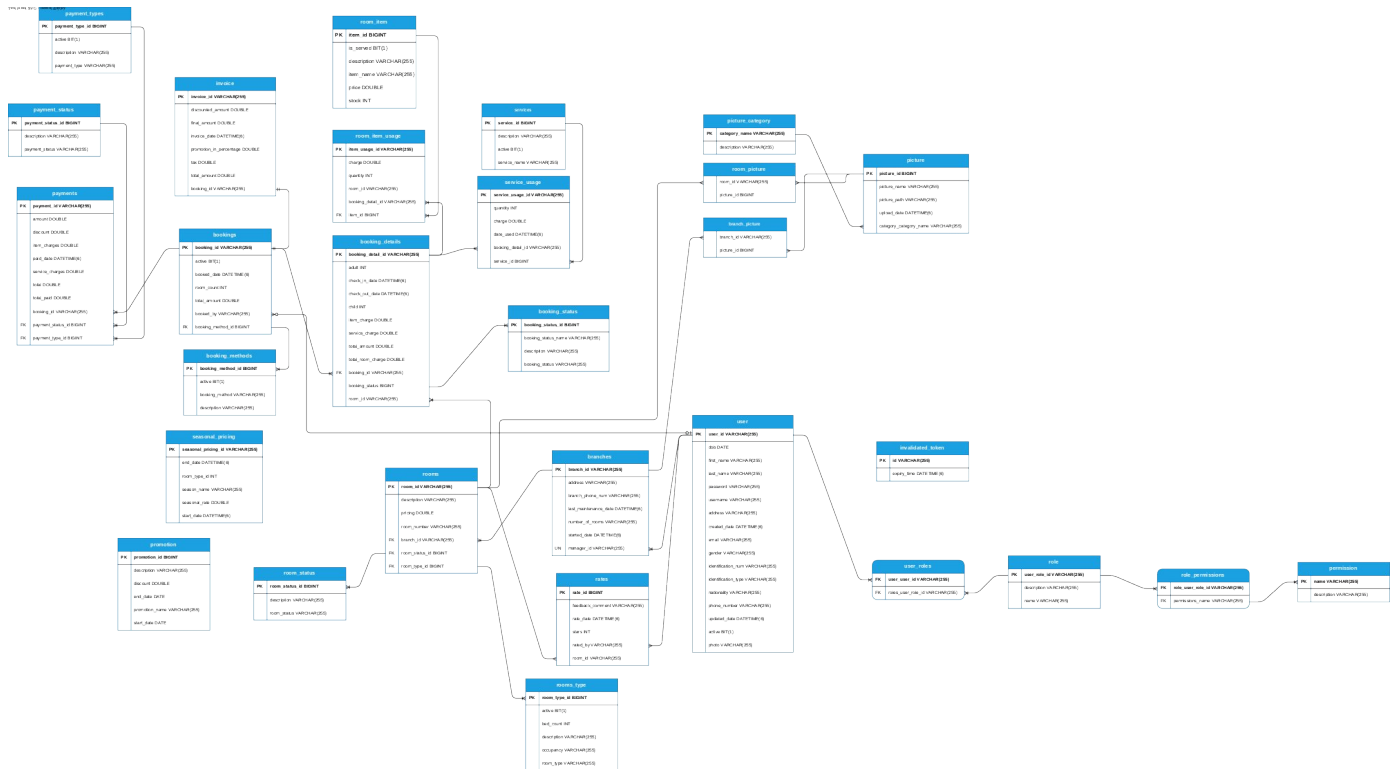

LEVEL 1 – Branch Manager Data Flow Diagram

Branch Manager Role Summary

- **Login:** Manager logs in, verified by User table.
- **View Reports:** Manager generates reports on occupancy, revenue, and service usage, using data from Booking, Payment, Service_Usage, and Item_Usage.
- **Manage Pricing:** Manager adjusts room rates and promotions, updating Room and Rates.
- **Manage Availability:** Manager oversees room availability in Room_Status and manages restrictions.
- **Oversee Staff Access:** Manager coordinates with IT to ensure staff permissions match roles, stored in User_Type.
- **Manage Promotions:** Manager updates promotions, stored in Promotion and applied in bookings.

VI. Entity Relations Diagram

VII. Data Dictionary

- **Column Name:** The name of the column.
- **Data Type:** MySQL-compatible data type for each column.
- **PK:** "Yes" if the column is a primary key; otherwise, "No".
- **Allow Null:** Specifies if the column can accept null values ("Yes" or "No").
- **Description:** A brief description of the purpose of the column.

1. Room_Type Table

Column Name	Data Type	PK	Allow Null	Description
Room_Type_ID	INT	Yes	No	Unique identifier for the room type.
Room_Type	VARCHAR(50)	No	No	Type of the room (e.g., Standard, Deluxe).
Description	VARCHAR(200)	No	Yes	Description of the room type.
Occupancy	TINYINT	No	No	Maximum occupancy allowed for this room type.
Bed_Count	TINYINT	No	No	Number of beds in the room type.
Active	BOOLEAN	No	No	Indicates if the room type is active.

Purpose: Stores information about different types of rooms available in the hotel.

2. Room_Status Table

Column Name	Data Type	PK	Allow Null	Description
Room_Status_ID	INT	Yes	No	Unique identifier for the room status.
Room_Status	VARCHAR(50)	No	No	Current status of the room (e.g., Available, Booked).
Description	TEXT	No	Yes	Description of the room status.

Purpose: Defines various statuses that a room can have (e.g., available, booked, cleaned).

3. Branches Table

Column Name	Data Type	PK	Allow Null	Description
Branch_ID	INT	Yes	No	Unique identifier for the branch.
Manage_By	VARCHAR(100)	No	No	Manager's name or ID managing the branch.
Branch_Phone_Num	VARCHAR(20)	No	No	Contact number for the branch.
NumberOfRoom	INT	No	No	Total number of rooms in the branch.
Address	VARCHAR(200)	No	Yes	Address of the branch.
Started_Date	DATE	No	No	Date the branch started operation.
Last_Maintenance	DATE	No	Yes	Date of the last maintenance for the branch.
Branch_Picture	BLOB	No	Yes	Image of the branch.

Purpose: Contains information about different hotel branches.

4. Booking_Status Table

Column Name	Data Type	PK	Allow Null	Description
Booking_Status_ID	INT	Yes	No	Unique identifier for the booking status.
Booking_Status	VARCHAR(50)	No	No	Status of the booking (e.g., Confirmed, Cancelled).
Description	VARCHAR(200)	No	Yes	Additional details about the booking status.

Purpose: Stores possible statuses of a booking, like confirmed or cancelled.

5. Booking_Method Table

Column Name	Data Type	PK	Allow Null	Description
Booking_Method_ID	INT	Yes	No	Unique identifier for the

				booking method.
Booking_Method	VARCHAR(50)	No	No	Method used for booking (e.g., Online, Walk-in).
Description	TEXT	No	Yes	Details about the booking method.
Active	BOOLEAN	No	No	Indicates if the booking method is active.

Purpose: Manages various ways customers can book rooms.

6. Payment_Type Table

Column Name	Data Type	PK	Allow Null	Description
Payment_Type_ID	INT	Yes	No	Unique identifier for the payment type.
Payment_Type	VARCHAR(50)	No	No	Type of payment (e.g., Credit Card, Cash).
Description	TEXT	No	Yes	Details about the payment type.
Active	BOOLEAN	No	No	Indicates if the payment type is active.

Purpose: Stores different payment types accepted by the hotel.

7. Role Table

Column Name	Data Type	PK	Allow Null	Description
Role_Name	VARCHAR(255)	Yes	No	Role of the user (e.g., Customer, Staff).
Descriptions	VARCHAR(200)	No	Yes	Description of the user role and permissions.
Active	BOOLEAN	No	No	Indicates if the user type is active.

Purpose: Defines various roles for system users and their permissions.

8. Promotion Table

Column Name	Data Type	PK	Allow Null	Description
Promotion_ID	INT	Yes	No	Unique identifier for the promotion.
Promotion_Name	VARCHAR(50)	No	No	Name of the promotion.
Start_Date	DATE	No	No	Start date of the promotion.
End_Date	DATE	No	No	End date of the promotion.
Discount_Percentage	DECIMAL(5,2)	No	No	Percentage discount offered.
Description	VARCHAR(200)	No	Yes	Additional details about the promotion.

Purpose: Manages promotional offers available to customers.

9. Room Table

Column Name	Data Type	PK	Allow Null	Description
Room_ID	INT	Yes	No	Unique identifier for the room.
Room_Number	VARCHAR(10)	No	No	Room number within the hotel.
Room_Status_ID	INT	No	No	Foreign key to Room_Status table.
Room_Type_ID	INT	No	No	Foreign key to Room_Type table.
Branches_ID	INT	No	No	Foreign key to Branches table.
Descriptions	VARCHAR(200)	No	Yes	Description of the room features.
Price	DECIMAL(10,2)	No	No	Price per night for the room.

Purpose: Contains detailed information about each room in the hotel.

10. Booking_Detail Table

Column Name	Data Type	PK	Allow Null	Description
Booking_Detail_ID	INT	Yes	No	Unique identifier for the booking detail.
Booking_ID	INT	No	No	Foreign key referencing the Booking table.
Room_ID	INT	No	No	Foreign key referencing the Room table.
Date_From	DATE	No	No	Start date of the booking.
Date_To	DATE	No	No	End date of the booking.
Adult	TINYINT	No	No	Number of adults for the booking.
Child	TINYINT	No	Yes	Number of children for the booking.
Accepted_By	VARCHAR(100)	No	Yes	Name or ID of staff who accepted the booking.
Total_Charge	DECIMAL(10,2)	No	No	Total calculated charge for the booking.
Promotion_ID	INT	No	Yes	Foreign key referencing the Promotion table.
Price	DECIMAL(10,2)	No	No	Price per room for the booking period.

Purpose: Records detailed information for each booking, including dates, room, occupants, and total charges, linked to the main booking record.

11. User Table

Column Name	Data Type	PK	Allow Null	Description
UserID	INT	Yes	No	Unique identifier for each

				user.
User_TypeID	INT	No	No	Foreign key referencing the User_Type table, defining the user role.
FirstName	VARCHAR(50)	No	No	User's first name.
LastName	VARCHAR(50)	No	Yes	User's last name.
Gender	CHAR(1)	No	Yes	User's gender (e.g., 'M' for male, 'F' for female).
Address	VARCHAR(200)	No	Yes	User's address.
Email	VARCHAR(100)	No	No	User's email address.
PhoneNum	VARCHAR(20)	No	Yes	User's phone number.
Identification_Num	VARCHAR(20)	No	Yes	Identification number (e.g., passport, ID card).
Identification_Type	VARCHAR(20)	No	Yes	Type of identification (e.g., passport, ID).
Nationality	VARCHAR(50)	No	Yes	User's nationality.
Active	BOOLEAN	No	No	Indicates if the user account is active.
RegisterType	VARCHAR(50)	No	Yes	Method of registration (e.g., online, in-person).
Register_By_User_ID	INT	No	Yes	ID of the user who registered this account.
Username	VARCHAR(50)	No	No	Username for login purposes.
Password	VARCHAR(255)	No	No	Password for login purposes.
Created_Date	DATE	No	No	Date the user account was created.
Updated_Date	DATE	No	Yes	Date the user account was last updated.

Purpose: Manages user details and login credentials, linked to user roles and system access permissions.

12. Rates Table

Column Name	Data Type	PK	Allow Null	Description
Rates_ID	INT	Yes	No	Unique identifier for the rate.
RoomID	INT	No	No	Foreign key referencing the Room table.
Rated_By	VARCHAR(100)	No	Yes	Name or ID of user providing the rating.
Rate_Date	DATE	No	No	Date the rating was given.
Rate	TINYINT	No	No	Star rating provided for the room.

Purpose: Tracks customer ratings for each room, providing a record of feedback for room quality.

13. Booking Table

Column Name	Data Type	PK	Allow Null	Description
Booking_ID	INT	Yes	No	Unique identifier for each booking.
Booking_Status_ID	INT	No	No	Foreign key referencing Booking_Status table.
Booking_Method_ID	INT	No	No	Foreign key referencing Booking_Method table.
Booked_Date	DATE	No	No	Date the booking was made.
RoomCount	INT	No	No	Number of rooms booked.
Booked_By	INT	No	No	User ID of the person who made the booking.
Payment_ID	INT	No	Yes	Foreign key referencing the Payment table for payment information.

Purpose: Records general booking details, including booking status, method, room count, and associated payment.

14. Payment Table

Column Name	Data Type	PK	Allow Null	Description
Payment_ID	INT	Yes	No	Unique identifier for each payment.
Booking_ID	INT	No	No	Foreign key referencing Booking table.
Payment_Type_ID	INT	No	No	Foreign key referencing Payment_Type table.
Amount	DECIMAL(10,2)	No	No	Amount paid for the booking.
Paid_Date	DATE	No	No	Date the payment was made.
Paid_By	INT	No	No	User ID of the person who made the payment.
Service_Charge	DECIMAL(10,2)	No	Yes	Additional charge for in-room services.
Total_Paid	DECIMAL(10,2)	No	No	Total amount paid (including service charges).

Purpose: Manages payment records for each booking, including payment type, date, and total amount.

15. Picture Table

Column Name	Data Type	PK	Allow Null	Description
Picture_ID	INT	Yes	No	Unique identifier for each picture.
Room_ID	INT	No	Yes	Foreign key referencing the Room table.
Branch_ID	INT	No	Yes	Foreign key referencing the Branches table.
Picture	BLOB	No	No	Binary data for the picture.
Description	VARCHAR(100)	No	Yes	Description of the picture.
Upload_Date	Date	No	No	Date the picture was uploaded.

Purpose: Stores images of rooms and branches for visual representation in the system.

16. Permission Table

Column Name	Data Type	PK	Allow Null	Description
name	VARCHAR(255)	Yes	No	Unique identifier for each permission.
description	VARCHAR(255)	No	Yes	Description of the permission.

Purpose: Stores all the system permission.

17. Seasonal Pricing Table

Field Name	Type	Extra	Allow Null	Description
seasonal_pricing_id	VARCHAR(255)	PK	No	Unique identifier for seasonal pricing.
end_date	DATETIME(6)		Yes	End date of the seasonal pricing period.
room_type_id	INT	FK	Yes	Foreign key referencing the room_type table.
season_name	VARCHAR(255)		Yes	Name of the season.
seasonal_rate	DOUBLE		Yes	Seasonal rate for the room type.
start_date	DATETIME(6)		Yes	Start date of the seasonal pricing period.

Purpose: Stores seasonal pricing information for different room types.

18. Service Usage Table

Field Name	Type	Extra	Allow	Description
------------	------	-------	-------	-------------

Null				
service_usage_id	VARCHAR(255)	PK	No	Unique identifier for service usage record.
quantity	INT		Yes	Quantity of the service used.
charge	DOUBLE		Yes	Charge for the service usage.
date_used	DATETIME(6)		Yes	Date and time the service was used.
booking_detail_id	VARCHAR(255)	FK	No	Foreign key referencing booking_detail table.
service_id	BIGINT	FK	Yes	Foreign key referencing the service table.

Purpose: Tracks the usage of services, including quantity, charges, and the associated booking details.

19. Service Table

Field Name	Type	Extra	Allow Null	Description
service_id	BIGINT	PK, Auto Increment	No	Unique identifier for the service.
description	VARCHAR(255)		Yes	Description of the service.
active	BIT(1)		Yes	Indicates whether the service is active (1) or not (0).
service_name	VARCHAR(255)		Yes	Name of the service.
price	DOUBLE		Yes	Price of the service.

Purpose: Stores information about the services offered, including their names, descriptions, prices, and active status.

20. Room Item Table

Field Name	Type	Extra	Allow Null	Description
item_id	BIGINT	PK, Auto Increment	No	Unique identifier for the room item.
is_served	BIT(1)		Yes	Indicates whether the item is served (1) or not (0).
description	VARCHAR(255)		Yes	Description of the room item.
item_name	VARCHAR(255)		No	Name of the room item.
price	DOUBLE		Yes	Price of the room item.
stock	INT		Yes	Current stock of the room item.

Purpose: Stores information about items available in rooms, including their names, descriptions, prices, stock levels, and whether they are served.

21. Room Item Usage Table

Field Name	Type	Extra	Allow Null	Description
item_usage_id	VARCHAR(255)	PK	No	Unique identifier for the room item usage record.
charge	DOUBLE		Yes	Charge for the room item usage.
quantity	INT		Yes	Quantity of the room item used.
room_id	VARCHAR(255)	FK	Yes	Foreign key referencing the room table.
booking_detail_id	VARCHAR(255)	FK	No	Foreign key referencing booking_detail table.
item_id	BIGINT	FK	No	Foreign key referencing the room_item table.

Purpose: Tracks the usage of room items, including charges, quantities, and associated room and booking details.

22. Payment Status Table

Field Name	Type	Extra	Allow Null	Description
payment_status_id	BIGINT	PK, Auto Increment	No	Unique identifier for the payment status.
description	VARCHAR(255)		Yes	Description of the payment status.
payment_status	VARCHAR(255)		No	Name of the payment status.

Purpose: Stores information about the different payment statuses, including their IDs, descriptions, and names.

23. Invoice Table

Field Name	Type	Extra	Allow Null	Description
invoice_id	VARCHAR(255)	PK	No	Unique identifier for the invoice.
discounted_amount	DOUBLE		Yes	Discounted amount applied to the invoice.
final_amount	DOUBLE		Yes	Final amount after applying discounts and taxes.
invoice_date	DATETIME(6)		Yes	Date and time the invoice was generated.
promotion(%)	DOUBLE		Yes	Promotion percentage applied to the invoice.

tax	DOUBLE		Yes	Tax amount applied to the invoice.
total_amount	DOUBLE		Yes	Total amount before discounts and taxes.
booking_id	VARCHAR(255)	FK	Yes	Foreign key referencing the booking table.

Purpose: Stores invoice information, including amounts, discounts, taxes, and associated booking details.

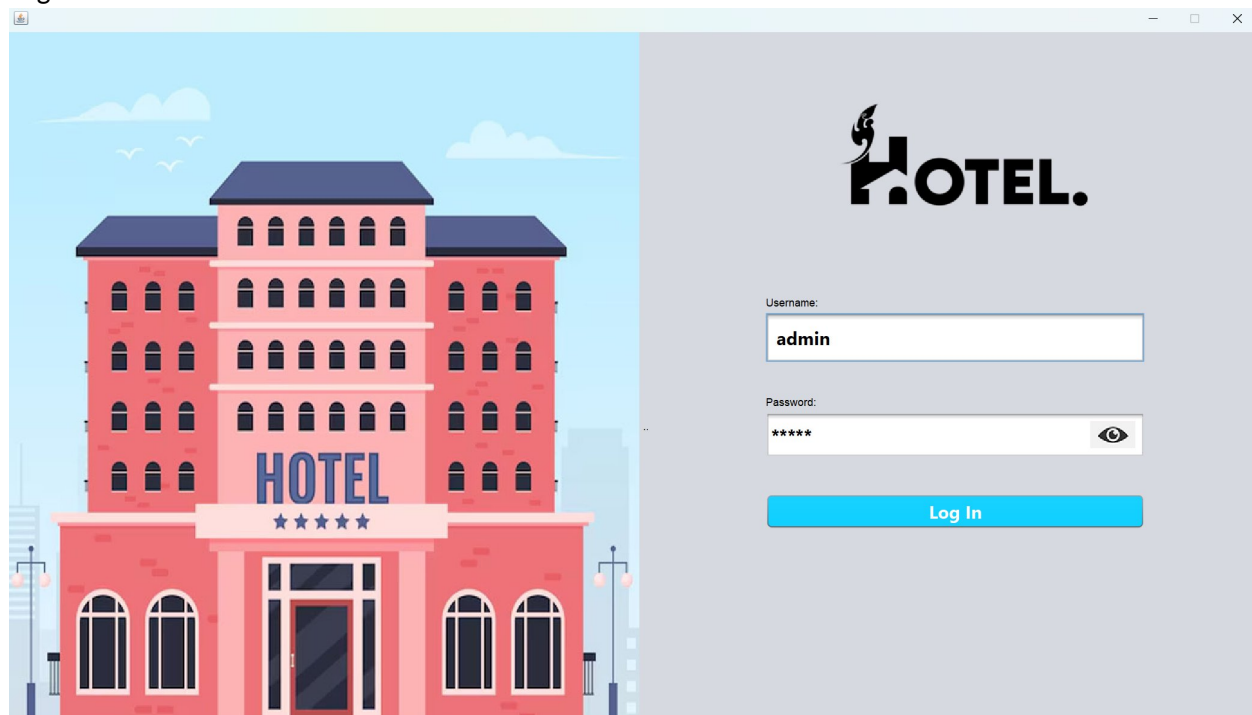

24. Picture Category Table

Field Name	Type	Extra	Allow Null	Description
category_name	VARCHAR(255)	PK	No	Name of the picture category.
description	VARCHAR(255)		Yes	Description of the picture category.

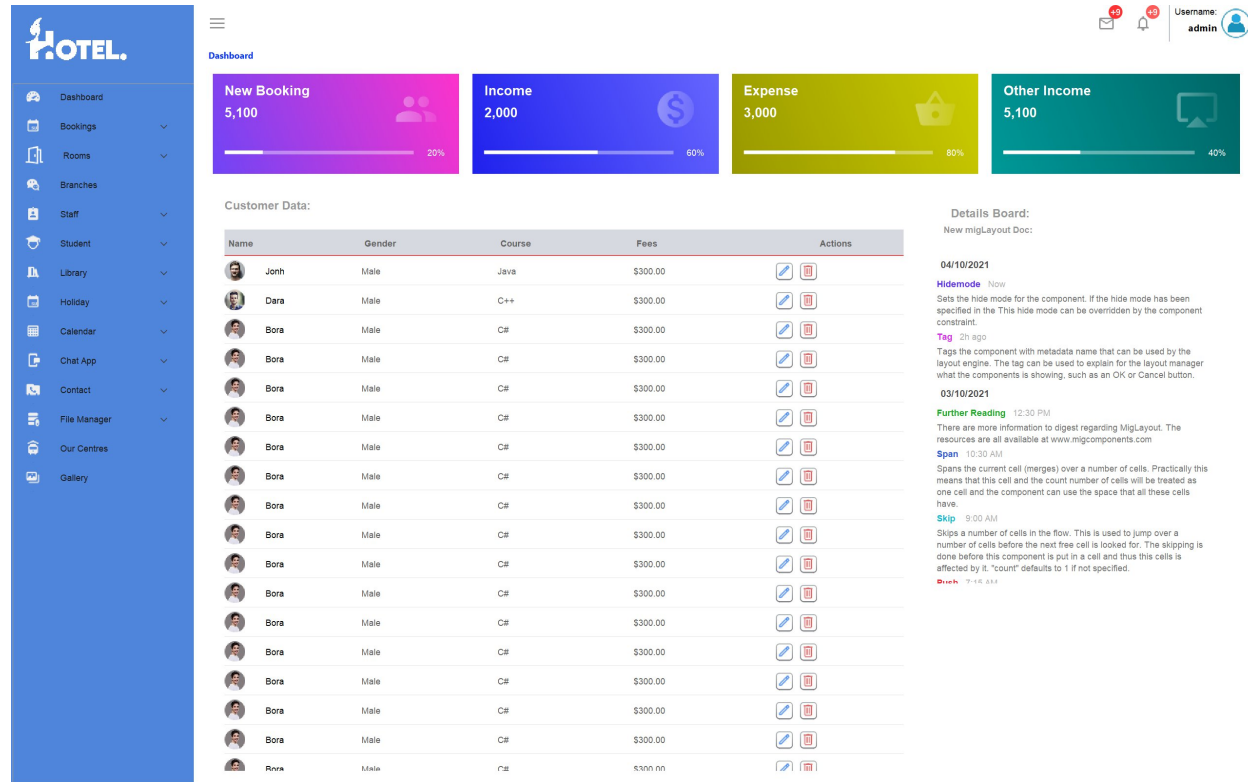

Purpose: Stores information about picture categories, including their names and descriptions.

Log In Form

Dashboard:

IX. Test Cases

All the test below will be done by **Mr. Ho Jun Hong**.

Test Cases for User Login

Date							
Test By	Ho Jun Hong						
Function	Log In						
Test Case ID	Test Case Title	Test Case Description	Preconditions	Test Steps	Expected Result	Actual Result	Status
TC001	Valid Login	Verify successful login with valid credentials.	User has a valid account in the system.	1. Go to the login page. 2. Enter a valid username and password. 3. Click "Login."	User should be successfully logged in and redirected to the dashboard.		Pass/Fail
TC002	Empty Credentials	Ensure login fails with empty username and password fields.	User is on the login page.	1. Leave username and password fields empty. 2. Click "Login."	Error message "Username and password are required" should be displayed.		Pass/Fail
TC003	Account Lock	Verify account lock after multiple failed login attempts.	User has an account with multiple failed attempts enabled.	1. Enter an invalid password multiple times (e.g., 5 times). 2. Attempt login again.	Account should be locked, and a message indicating account lock displayed.		Pass/Fail
TC004	Role-Based Redirection	Verify redirection after successful login based on	User has specific role-based access.	1. Log in with credentials of a specific role (e.g.,	User should be redirected to their respective		Pass/Fail

		user role.		Admin, Front Desk). 2. Check redirection.	dashboard or view.		
--	--	------------	--	--	--------------------	--	--

Test Cases for Room Booking

Date							
Test By	Ho Jun Hong						
Function	Room Booking						
Test Case ID	Test Case Title	Test Case Description	Preconditions	Test Steps	Expected Result	Actual Result	Status
TC005	Book a Single Room	Verify user can successfully book one room.	Available room exists in the system.	1. Go to the booking page. 2. Select a room and enter booking details. 3. Confirm booking.	Room should be booked successfully.		Pass/Fail
TC006	Book Multiple Rooms	Attempt to book multiple rooms in one transaction.	Multiple rooms are available.	1. Go to the booking page. 2. Select multiple rooms in one transaction.	System should restrict the booking to one room at a time.		Pass/Fail
TC007	Modify Booking	Verify user can modify an existing booking.	Existing booking in the system.	1. Open an existing booking. 2. Modify the booking details. 3. Save changes.	Booking should be updated successfully.		Pass/Fail
TC008	Cancel Booking	Verify user can cancel a booking before check-in.	Existing booking in the system.	1. Open an existing booking. 2. Click "Cancel Booking."	Booking should be canceled and marked as such.		Pass/Fail
TC009	Extend Stay	Verify user can extend the stay if rooms are available.	User has a current booking.	1. Go to the booking page. 2. Select option to extend stay. 3. Confirm extension.	Booking should be extended with recalculated charges.		Pass/Fail

Test Cases for Payment Processing

Date							
Test By	Ho Jun Hong						
Function	Payment						
Test Case ID	Test Case Title	Test Case Description	Preconditions	Test Steps	Expected Result	Actual Result	Status
TC010	Complete Payment	Verify payment can be successfully processed.	User has a booking with outstanding charges.	1. Go to the payment page. 2. Enter payment details. 3. Confirm payment.	Payment should be processed successfully.		Pass/Fail
TC011	Partial Payment	Attempt partial payment on a booking.	User has a booking with outstanding charges.	1. Go to the payment page. 2. Attempt to pay only a part of the total amount.	System should disallow partial payments.		Pass/Fail
TC012	Payment for Additional Services	Verify payment for in-room items and services.	User has used additional services.	1. Add in-room services to booking. 2. Go to	Payment should include additional services.		Pass/Fail

				payment page and complete payment.			
--	--	--	--	------------------------------------	--	--	--

Test Cases for Room and Service Management

Date							
Test By	Ho Jun Hong						
Function	Service Management						
Test Case ID	Test Case Title	Test Case Description	Preconditions	Test Steps	Expected Result	Actual Result	Status
TC013	Room Status Update	Verify room status is updated after check-out.	Room has been checked out.	1. Complete check-out for a guest. 2. Check room status in system.	Room status should update to "Available" or "To be cleaned."		Pass/Fail
TC014	Housekeeping Coordination	Verify housekeeping notification for cleaning.	Room is checked out and needs cleaning.	1. Complete check-out for a guest. 2. Check housekeeping notifications.	Housekeeping should be notified for room cleaning.		Pass/Fail
TC015	Additional Service Usage	Verify service charges for in-room items are recorded.	User has requested additional services during their stay.	1. Add in-room items to booking. 2. Complete booking and view the final charges.	Charges should include all additional services.		Pass/Fail

Test Cases for System Administration and IT Support

Date							
Test By	Ho Jun Hong						
Function	Adminstrator and IT Support						
Test Case ID	Test Case Title	Test Case Description	Preconditions	Test Steps	Expected Result	Actual Result	Status
TC013	User Role Management	Verify that users can be assigned specific roles.	System admin access required.	1. Log in as an admin. 2. Go to user management. 3. Assign a role to a user.	Role should be assigned successfully.		Pass/Fail
TC014	Data Backup	Ensure data can be backed up regularly.	System is running and has data.	1. Log in as an admin. 2. Initiate data backup process.	Backup should be completed successfully.		Pass/Fail
TC015	System Security	Verify unauthorized access is restricted.	System security settings configured.	1. Attempt login with invalid user credentials multiple times.	Account lock or restriction should be triggered.		Pass/Fail

X. Product Backlog

ID	User Story	Estimate	Priority	Sprint	Status
Room Management					
1	As a Hotel Manager , I can manage room types (e.g., Standard, Suite) and rooms with pricing.	32	High	1	Open

2	As a Housekeeping Staff , I can update room status (e.g., Cleaned, Maintenance).	24	Medium	1	Open
Booking Management					
3	As a Front Desk Staff , I need to create room bookings so that guests can reserve rooms.	28	High	2	Open
4	As a Front Desk Staff , I can modify existing bookings to adjust dates or rooms.	28	High	2	Open
5	As a Front Desk Staff , I can modify existing bookings to extends their stays.	20	High	3	Open
6	As a Front Desk Staff , I can cancel bookings to free up rooms.	12	Medium	3	Open
Service Management					
7	As a Hotel Manager , I can define new services and their prices.	20	High	4	Open
8	As a Front Desk Staff , I can add services (e.g., breakfast, laundry) to bookings.	10	Medium	4	Open
Room Item Management					
9	As a Hotel Manager , I can define new room items and their prices.	20	High	4	Open
10	As a Front Desk Staff , I can add Room Item (e.g., Drinks, Snack) to bookings.	6	Medium	4	Open
Billing and Reporting					
11	As a Front Desk Staff , I can generate invoices during check-out.	30	High	5	Open
12	As a Hotel Manager , I can view daily occupancy and revenue reports.	28	High	5	Open
System Administration					
13	As a System Admin , I can manage user roles (Front Desk, Manager, Admin).	30	High	6	Open
14	As a System Admin , I can perform database backups and restores.	28	Low	6	Open
